Comments: I adamantly oppose this project due to the extreme impact and change to the current atmosphere and ambiance of the area. The proposal is set to greatly increase the density of structures in the area. It does not seek to conform and blend into the existing scenery and rather than enhancing an existing destination seeks to further transform it forever changing the dynamic and scene of the area. Forest service land is public land as such the public should determine its highest and best use. Since there are existing structures on this/these parcel (s) no changes above what is existing should be allowed on the property as that is the only impact that is known. Any greater density has an unknown environmental impact and should be subjected to the appropriate protocols regarding environmental impact typical of projects of this scope and magnitude especially on a watershed area adjacent to one the wildest wilderness areas in the nation. Please do not allow for the moving forward of this project without public support and input.
