Comments: My comments will very likely not be published. I am a legal/contracts expert, and based on my experience my personal view is as follows. The secretive fast tracking of this clearly misplaced project, without public review of its impact on this unique and beautiful environment, smacks of cronyism and likely corruption on part of the public officials in charge. It seems like the main reason for rushing this project is to benefit the public officials, or their friends or family members through direct or indirect kickbacks or other means. The project should be stopped right away, and an independent audit needs to be done to determine why this was being pushed in the first place.
