Comments: My family enjoys the outdoors of Montana with hiking, camping, fishing, and backpacking. If forest service land is going to be used or taken away testing or environmental repercussions should be completed and thought through. This project on Holland Lake need to be environmentally tested and publicly approved. How will this effect the lake and the animals and ecosystem within it? The lodging location is already established and can be updated however complete take down of most of the buildings to establish a resort on forestry land sounds economy wonderful but permanently damaging to forestry land and ecosystem of the lake. This lake is already being enjoyed by the public in a less distructive way, let's keep it that way. Powdr can find a way to maintain the integrity of the land with a less intrusive plan that distort what nature already provided.
