Comments: This large expansion in the Holland Lake area may be detrimental to nesting birds, native fish, and other wildlife that inhabit or visit the area seasonally. This is a quiet wilderness ecosystem. Change of the magnitude proposed, can not be helpful, and therefore it should be reconsidered. I have an issue with the waste water treatment and water use, plus handling the increased amount of garbage could be an attractant to bears. The beautiful hiking trails will be very crowded especially on weekends, and the increased road use and parking challenges will complicate the situation. I urge you to reconsider this unwise expansion.
