Comments: The proposed plan for Holland lake would have a negative effect on the lake and surrounding eco system. I am against the project.

The last thing this area needs is a Yellowstone Club 2.0, locking the public out of our lands and destroying the surrounding area. Montana has already been bled dry for its copper, and the legacy of pollution and contamination will last for generations. Now companies like this are trying to do the same thing again. Though the means are different, they are still extracting resources with only their customer in mind, while making us the public foot the bill. Whether its decreased access, environmental remediation due to some budget related accident, or increased traffic on a delicate and dwindling environment.

In short, I am strongly opposed to this project.
