Title:

Comments: I object to the development of Holland Lake Lodge into a large private resort.

1. The highway through this area is already very dangerous with many accidents, and is not designed to handle more traffic safely. I do not hear of any plans for the developers to share costs in improving the safety and capacity of access highway, let alone adding more traffic for their profit.

2. How does this development compliment the existing uses of this area and community. I understand private owners have a right to sell, but public lands offices in near and surrounding areas owe it to evaluate all competing and shared public uses.

3. What is being done to replace the public use camping and lake access options for this area with proposal for this affordable option for local camping being taken away?

4. Does the public really have any say in this, since it is a private sale? I would want to hear the Forest Service address this and speak transparently about this. Why is there a public comment if there are not avenues for public to stop this development? Transparency is integrity in government transactions.

5. Is there an avenue for public comment to effect the size and impact of this development? Or is the Forest Service just going through necessary and required hoops to proceed with this development on private land near a Forest, but not under control of the Forest?

Thank you, Pieter Sween
