Comments: I adamantly oppose to this proposal of expanding and building on the banks of Holland Lake. This is one of Montana's pristine gems and should be preserved for future generations. This project will gravely impact the area and the wildlife that call that area home. Paved roads lead to increase traffic and speeds which increases area use and increase the chances wildlife be hit and injured and killed. Wildlife will negatively be impacted as the landscape will need to be altered in order for new development to happen. There will be an increase in noise and air pollution stressing the surrounding forest. Water pollution will also increase with increased use which negatively impacts the aquatic ecosystem. This beautiful, quiet, pristine place will be ruined. No amount of financial gain is worth losing this for Montana. This project should not be allowed to happen. We need to preserve these places and take care of our environment and the wildlife that reside there. There are plenty of beautiful already built up places to visit in Montana. If we are not careful, the Last Best Place will have absolutely no meaning and what a shame.
