Comments: I am opposed to this increased development at Holland Lake! An expanded Holland lake facility include more cabins,a big lodge, more boats ...resulting in more traffic, human activity, noise, pollution next to Bob Marshall wilderness which is prime grizzly habitat. Seeley swan corridor is a quiet 2 lane highway primarily used by locals and actually runs through 2 prime grizzly areas ..the Bob Marshall and the mission mountains . If 1/10 of the visitors that Visit Glacier and Yellowstone use this corridor to go to the parks , given that there could be a major attraction there , we can imagine how the traffic will change considering they get over 1 million visitors a year .

Please complete a formal impact study before considering such a development Forest service land is public land, this is how we want to see public land being developed in the wild areas of MT. Thank you.
