Comments: The Forest Service needs to relook at the scope of this project. As proposed, tripling the capacity of accommodations, it is too large. I recommend allowing only a doubling of capacity. If a project is approved for any size of additional accommodation capacity, I recommend the following: 1) more trails need to be developed, as the trails are over capacity at busy times currently, 2) the developer be required to plant trees in and around the area where so many trees would be removed for development, 3) require the developer to create a trail through the developed area from the campground to the trails for easy access to the trail system (currently there are log fences requiring campground hikers to walk the dusty busy road to access trails), and 4) the current gravel road needs to be black topped or put mag chloride down to abate dust.
