Comments: I have spent a number of summer holidays at Holland Lake. While not a big fan of using public lands for exclusive commercial use, the current lodge seems to be a reasonable fit for the type of recreation that occurs there. I do not believe that would be the case if the commercial use were to undergo a substantial increase as what appears to be proposed. I strongly encourage USFS to At the least go through a full NEPA process before making a decision on what to do with the lease. Holland Lake is already a very high use area, so impacts to recreation as it now occurs, and impacts to fish, wildlife, and water resources could also be significant. Of particular concern would be possible increase in human/ wildlife conflicts in an area supporting grizzly bears. The situation would seem to warrant a full EIS in light of those issues. Thanks for the opportunity to comment.
