Comments: As a person who has been recreating in the Holland Lake area for 30 years, I am concerned about the environmental impact of a large scale development by an out of state corporation on Holland Lake. Has there been extensive research on the expansion of sewer/septic systems, power grid, and waste with the increased number of buildings, restrooms, RV spots, and road/parking lot construction? How will this expansion affect the water quality and wildlife habitat with increased infrastructure in this area. Furthermore, how will greater human and vehicle/boat use affect the area? Finally, does an out of state corporation have Montana's best interest in mind when expanding a business that sits in the heart of various pristine natural wilderness areas?
