Title:

Comments: The scale of this development will irretrievably negatively impact wildlife habitat and T&E species.

The proposed development is in prime grizzly habitat and well within the NCDE grizzly bear recovery zone. The conservation strategy explicitly states that the number and capacity of new developed recreation sites shall be limited. The proposed development does not constitute one new developed unit similar to new campsites in a campground or a rental cabin, and to suggest so violates the conservation strategy. Deny or extremely limit this development.
