Comments: I have concerns regarding how the lake water quality will be affected by this expanded use. What will be the nutrient loading effects from sewer management? Will there be increased septic tank inputs or other sewage treatments? Historically many mountain lakes have had water quality adversely affected by sewage septic tank inputs. Also what controls will there be on the number of motorboats? Undoubtedly their use will increase with a larger lodge. Whitefish Lake has recently had problems with petroleum pollution. Holland Lake is a beautiful, pristine Lake that should be preserved under a special designation and not opened to greedy developers. It is a Montana treasure that now everyone can afford to visit and enjoy. Let's not ruin it!! We've all seen this story before. I recommend the USFS terminate the lease altogether.
