Comments: It's very discouraging to hear about a project misinforming the public about a development of public land. Especially land that carries an ecosystem that the wildlife are dependent on. Bears alone are getting euthanized everyday. Encroaching on their habitat further would increase those situations, which is sad enough. Loons have nests all over the lake. There are turtles and fish that can't withstand anymore boat traffic than there already is. I feel sorry for the wildlife. They depend on this lake and you would think that the FWP would understand that as well. By continuing the development of isolated beautiful places, there won't be any left.
