Comments: Please consider the size and impact on the surrounding region this project will weigh on the Swan Valley environment. I can understand how making improvements to Holland Lake Lodge will benefit the area financially, but the size of the increase could tip the scales enormously for the surrounding residents. I have already seen how well the MT fisheries has managed the local fishing over the last 50 years and now I see where we have very few frogs and amazingly very few deer in the area. By increasing the Holland Lake Lodge footprint there are even more species that will be impacted. AND I had to laugh when I saw it was stated there were no bears in the provided documentation. I would love to see how the guests will survive when they happen upon a bear. Before a project of this magnitude is initiated, please make sure all environmental impacts are pursued. The local fishing holes, hiking trails, and even the Bob Marshalls should be protected from the onslaught of this much humanity.
