Comments: I am concerned that a out of state developer will focus on profits over environmental protection and not maintain their infrastructure to protect OUR public lands. What will happen to the facility if they fail? Are they going to be bonded to return the site to its native condition? How will they deal with wastewater and ensure that the system is operating correctly? There are too many unanswered questions. Return the site to its natural state or make it a campground that will be accessible to all, not just the wealthy few. I do not support this "Improvement"
