Comments: Impact of proposal on My personal experience as a member of the public on public land
I come for the quiet, sleep in a tent with the stars, SUP in the morning watching the loons, mountain and sky views from every campsite, to walk barefoot and be in Nature.

This proposal would impact my experience.

It would no longer quiet, many campsites would not exist and would be buildings and parking instead, the loons would be displaced, the view from campsites would be buildings, pavement, parking and private keep out signs, trash would inevitably increase, be in a business in civilization just like in the city

My requests:

Holland Lake is public land. The public deserves to be involved and included in the decisions about Holland Lake. There are so many questions and comments.

* At least one public meeting in Missoula so that the people of Missoula can easily attend and be involved.

* Extend public comment period to 60 days

*The Forest Service to show up as the Forest Service and their mission statement. Be the advocate for the land, loon, grizzly, bull trout, people of this valley, next generation, listen and think creatively about how to best serve people

*NO to the current project proposal. Start again with a new vision that follows Forest Service mission where the land comes first.

At a minimum, absolutely MUST complete a full environmental survey and adhere to the recommendations provided by this survey.

It IS possible to write a new story where money doesn't get the last word, the loon does.
