Comments: To whom it may concern,

This is a horrible project on every front. Not only do we need more trees we need trees and landscape in this area. What you propose for road access will destroy this area. This area because it is adjacent to the Yellowstone ecosystem all animals that reside there pass thru this system as well. Science believe that this will be devastating to the American pine martin. There is a big concern for native species and increased sedimentation and loss of water quality for riparian habitats.

This is not acceptable to add 56 miles of roads into this beautiful area.

I vote no on this project.
