Title:

Comments: This is a disastrous project which will totally disrupt the area, where is the environmental analysis on what damage will be done with construction equipment, vehicle traffic, destruction of habitat and loss of food for wildlife. None of these various government agencies supposedly for the protection of forest, wildlife, habitat does anything but protect and encourage corporate and various commercial enterprises. Leave our lands and animals wild, get any form of infrastructure out. For real land management allow indigenous peoples to steward the land, you'll have better results.
