Title:

Comments: Where is the Environmental Impact Statement on SPLAT? How much more wildlife land will be destroyed by the Forest Service leading to more wildlife deaths and no land left for wildlife creatures to live on safely? Does the logging industry make all the decisions in this country on what to do with public lands and forests? Every creature on this planet has a purpose, not just human beings, when will we stop being selfish and making decisions that only benefit people? So before we destroy more land with roads and logging and building can we think about the damage it will do to the wildlife, the environment and how we can never get these things back.

Thank you for your time.
