Comments: Montana is one of the last remaining states containing an array of our country's precious wildlife! If Montana isn't trying to shoot and kill as many predators as they can now Montana is going to simply tear the habitat down! Please stop!!!!!!

Wildlife biologists need to evaluate how logging, building roads, and prescribing fire near highways in Hebgen Basin affects migratory buffalo.

Fire can be beneficial for habitat in the range of migratory buffalo, but it needs to be used in a manner that doesn't draw buffalo onto or across highways.

The Custer Gallatin's analysis - cumulatively logging nearly 32 square miles of habitat and building 71 miles of road on the South Plateau and North Hebgen is somehow beneficial to wildlife species - doesn't pass muster.

The Custer Gallatin needs to conduct an Environmental Impact Statement of all logging and road building underway and planned in Hebgen Basin, including in the South Plateau and North Hebgen.

Cumulatively logging over 20,000 acres of habitat and building 71 miles of roads - the equivalent of building a road from West Yellowstone to Ennis, Montana - is a major action and significant long-term harm to wildlife, soils, and water quality.

World class scenic views and visitors hiking the trails along the Continental Divide will also be harmed.

More roads should be removed - not built - to provide secure habitat for grizzly bear, moose, and elk, and reduce sediment running into creeks and rivers in Hebgen Basin.
