Comments: I respectfully request that this Project #57353 be withdrawn and a proper Environmental Impact Survey be completed. The area affected is critical wildlife habitat that borders Yellowstone National Park and is home to many species such as bear, moose, elk, wolves and wolverine to name a few. This land is part of the Greater Yellowstone Ecosystem and deserves to be protected for the sake of biodiversity and climate crisis mitigation. It is absolutely essential that no roads be built in this wildlife corridor which will impact healthy animal migration patterns. The forest needs to remain natural in order to continue to sustain the wildlife and human lives that depend on it.
