Comments: You need alternatives, including status quo...no action, as one of them. You need an EIS on a project this big. You do not need to clearcut to "treat" a forest. You should not be subsidizing logging by building roads with taxpayer money. This whole proposed project does not sound necessary nor feasible, and not only negatively affects the land by exposing it to the sun and heating it in these times of drought and global warming, but also is in the middle of important wildlife migration corridors!

Do not proceed without an EIS and more public awareness.
