Comments: The SPLAT Project #57353 in West Yellowstone, MT is being proposed by the USFS. It would punch 56 miles of roads into the Hebgen Basin in order to log, bulldoze, & burn 23 square miles of prime wildlife habitat. The amount of logging would require 25,000 logging trucks to haul logs, debris etc. out of the forest. This project would affect bison, grizzlies, lynx, & other wildlife animals...some of which are endangered. It would ruin the wilderness. No EIS is planned which is wrong, perhaps illegal. Wildlife biologists should be consulted to evaluate the damage this project would cause to the environment & its inhabitants. I am asking the USFS to scrap this terrible plan. Leave Nature alone & stop interfering please. Thank you.
