Comments: Ref: Catamount Spring Creek Project 63036 Scoping Letter 10/18/2022 Page 6 Map

According to the Spring Creek Project map on page 6 of the Scoping letter, the proposed Pargin MTN UT 2 expanded pad is located in Archuleta County along with approximately one-third of the 8.4 mile access road and pipeline easement. The remaining two-thirds of the road and pipeline easement are in La Plata County. All of the above are located within the SJNF managed by the USFS. Much of the area is heavily vegetated or timbered. Will all three of these jurisdictions prepare and provide emergency response plans for their potential participation in wildfire suppression in case of a wildfire ignited as a result of well development or production in the area? To what degree will La Plata County and Archuleta County have input into determining the appropriateness of emergency response plans for such an eventuality, even if primary jurisdiction lies with the USFS? Will the Catamount Spring Creek Project EA evaluate this issue and determine what advance coordination and preparation would be appropriate?
