Comments: I object to the planned logging. I frequently hike through this area, preserving it's natural splendor for future generations is critically important. The plan will not only destroy its beauty, it will have a long term negative impact on the plant and animal life. Erosion is a constant battle for maintaining trails and roads, this will eliminate a lot of the natural erosion protections that these trees provide. I always envisioned this forest as a place where me, my family, and the surrounding community can experience natures god given beauty for generations to come. This shouldn't be sacrificed for short term financial considerations that only benefit the logging companies. Thank you.
