Comments: I am a person who has seen, clear cut destruction, I am opposed to it. Selective forestry with reforestation in sensitive areas is more cost efficient in the long run. I understand that a forest is a renewable resource and should be harvested in a timely manner. The removal of all vegetation will increase the possibility for uncontrolled ground run off into neighboring bodies of water. The use of chemicals during clear cuts will leach into subterranean aquifers. The loss of a complete ecosystem will be destructive not only to the natural habitants but to the community that surrounds it. Please reconsider and use other viable options for short- and long-term forestry management.
