Comments: Hello,

I anted to submit my opinion on the plan by USFS to open up the national forest for logging. I would like that this proposal be rejected as it has a severe impact on the overall ecology of the region as well a major step back on any meaningful climate change action. With the projections from UN clearly stating that we are well on our way to a 1.5 degree celcius rise in temperature, I find it absolutely unconscionable and abhorrant that an agency that shoild look out for the interests of the people who pay taxes for its running, shpuld instead try to sell of public land to the logging industry.

I believe that the public lands should not be open to commercial exploitation and should be preserved and protected for our children amd future generation.
