Comments: Dear Forest Service Folks

Kentucky does not need another area of clear cutting massive area of old growth forests.

The mudslides to the area is unavoidable. And devastating to local populations.

If you must logging at all please do a sustainable cut focused of certain trees only. Don't you have trained arborists or tree specialists to mark the diseased or problem trees? All of the problems associated with clear cutting are extremely detrimental to the areas people, creatures and economies.

If the invasive species are allowed to grow wild, the forest will be a jungle of trash. Tree of Heaven is a trash tree with no value at ALL!!!

Please reconsider different options for this Jellico region.

I remember hiking in the area during the 1983 Worlds Fair so good memories.

Sincerely Mrs. Mary Lyon
