Comments: I strongly object to this forest management project. Although it is claimed that it is for the benefit of the habitat, I believe it will cause far more harm than good. For example, two methods of clear-cutting are stated to be used, but in native forest ecosystems, clear-cutting is always detrimental to the environment. Also, this forest currently holds vast amounts of unstable soil in place, protecting the surrounding communities from flooding, landslides, etc. If this project is accepted it will almost certainly cause loss of life, not to mention the loss of a beautiful part of nature and the many species that call it home.
