Comments: I support this project we need more of these project to better the range and habitat. It will also help with the fire danger. So many our forest are over grown and neglected. I have been able to be part of some other range project and have seen the good that comes from them by in creasing the desired grasses and increasing the water out put on spring. They also help reduce the fire risk by reducing the fuels in the forest.
I have been in areas where similar projects have been done, and in the past there were no wild life in the area and now it is full of wildlife. This also is a huge benefit to the livestock by disbursing them and giving them more areas to feed.
Please continue to do these projects.
