Comments: This project fails to achieve an equitable trade in any measure for public land users. Additionally it seems unlikely that any trade would result in an equivalent or beneficial result for both habitat conservation or public land access. Given current disclosures this trade also appears to violate multiple rules for such trades and even more principles that though not strict rules are important to fair dealing that benefits the American people rather than wealthy private entities. Please re evaluate this trade with additional alternatives including defending existing right of ways, and land swap options that do not result in a net loss of federal control of wetlands, mineral rights, timber value or wildlife habitat.
