Title:

Comments: Please search for a more equitable solution to this. Access to our public land should be unquestionable. Private land holders should be held accountable for easements to public lands. One sided land swaps such as this are not in the publics interest. If we are to swap lands we need to be far less one sided in the appraisal of public lands, our public land is far more valuable to far more people than any private property and the valuation of it should reflect that value.
