Title:
Comments: I am totally opposed to this land exchange for all of the above stated reasons. The US Forest Service
should be working for the good of the public in improving public access instead of catering to the rich organizations trying to lock up our public land for their own uses. The Forest Service is obligated to conduct open analysis of all parts of this proposed exchange and not cater to these rich private organizations. I'm asking all proposals to be stopped until all necessary information be brought before the public.
