Comments: I have reviewed the parcel exchange, and there is a clear discrepancy in land value. The public portions that will become private are supreme elk and deer habitat, while the private portions to be made forest service are largely high mountain areas of little value. It also appears to block all access from Sweetgrass Creek Road. A better approach would be to fight for the legal access trails that have existed since the 1920s and have been illegally blocked by outfitting landowners.
