Comments: I fully support the full build proposal, Alternative 2, as I believe the additional trail development will allow for better dispersal of trail users. Additionally, I believe that the development of these trails will fully benefit the local Prineville economy by bringing people to the area. These trails would help to expand the local area trail network by filling a gap that currently exists (trails of the proposed type on this terrain as well as the number of trails currently in the Ochocos). If Alternative 2 is not supported enough, I do believe Alternative 6 would also be beneficial to the local area, albeit slightly less so than if Alternative 2 were to be chosen. As someone who has grown up in central Oregon, I can definitively say that the development of this trail network would greatly add to the value that exists in the central Oregon trail system by adding additional terrain diversity, greater trail options, as well as sheer mileage to help spread people out and maintain the secluded feel that can be obtained on some of the local trails, which is part of what makes these trails so special in the first place.
