Comments:
I have grown up rafting, birding, using the hot springs, fishing with my dad, kayaking and camping on the South Fork. Historically mining has not produced positive impacts or any restoration in areas and instead left it with long term contamination. The current plans will cause further destruction to the land and water. This will affect my availability to recreate in this area. I oppose allowing the Stibnite Gold Project to proceed as proposed because it will cause irreversible harm to water quality, wildlife, public health, and a sustainable outdoor recreation-based economy and pollute the area for generations to come. There would need to be air quality monitoring next to the site and along public access road to Thunder Mountain. As well the concern that the site would still need monitoring from contamination after it is closed is a safety issue. This project needs to be significantly revised or stopped.

Thank you,
SaRah Busse
