Comments: Comments:

1. The proposed fencing around the campgrounds raises concerns...It is expensive for installation and maintenance, it has visual effect on recreationists, barbed wire fences are dangerous to people and wildlife, eliminating grazing creates a atmosphere of high and dangerous fuels for wildfire - another option is to graze at a certain time and duration and then remove the livestock from the area.
2. Water Quality needs to explain the "shorter season of use" and especially further explain the "grazing outside of the most active growing season". Head months are not declined....The effects listed for Fisheries listed a minimal effect which is a bit different from the effects of Water Quality.....hmmm
3. How many public comments are there regarding cattle grazing on the allotments/conflicts
?
