Title:

Comments: So far we have not seen any habitat mitigation or project design measures crafted by either Perpetua Resources or the US Forest Service that will prevent adverse impacts to sensitive wildlife in the SFSR watershed. We are asking the Forest Service to develop additional alternatives, design features, and mitigation measures to reduce impacts to wildlife.

Wildlife do not recognize boundaries on maps - they move throughout the landscape. The South Fork Salmon River watershed provides an important linkage between areas like the Frank Church River of No Return Wilderness and the Middle Fork Salmon River corridor to the Secesh and Needles Recommended Wilderness Areas and down to the Main Salmon River.
