Comments: Dear Sirs,

I hope you will consider to not give approval for MVP to cross creeks by boring underneath. The MP has had a history during this whole project of not doing what they say they will; not doing their

activities in a environmentally safe manner. Yes I know is it close to being completed (no idea how close to being done - are they telling the truth?) - but two things to consider on that. Have they done things correctly before? Is the pipeline really needed? Even mostly done, I'm not sure completed it would add to the 'safety' of our energy situation. We need less carbon dioxide !!!!

Has anyone considered crossing the creeks with any exposed structure overtop and not trying to dig underneath?

Sinking Creek has such an odd base to it - after all - it disappears not far from the crossing - why do they think they can bore underneath without bringing up silt and destroying the creek bed?
