Comments: To whom it may concern,

I am writing to share concern over the management of natural resources and public land.

I oppose the Stibnite mine and any development that may threaten the watershed of the salmon river country.

These lands are historically and categorically important to all who live in and around the region. Recreation, environmental safety, etc...so is threatened by this mine, the list goes on and on. I hold a bachelors degree in ecology and conservation biology from the university of Idaho. I proudly represent many biological opinions that this mine would be devastating to this region. Please hear the people when they say NO. As a community -and as state, We have been discussing the importance of the anadromous fisheries for too long. It's time to do something about it. These lands are too important and too valuable for a private interest to make potential funds on public land. Say NO to the Stibnite mine.

Sincerely, Autumn Lear
