Comments: Here we go again...history repeating itself for the benefit of big industry, and screw the animals, environment, and people! The real solution is to quit having so many babies & overcrowding the planet! Then, would there be a need for so many minerals at the expense of our planet? If this Canadian company wants minerals, let them destroy their own landscape. If a U.S. company wants to do the same thing with mineral extraction, take it to West Virginia! It's already destroyed! I boat the South Fork of the Salmon River, the main Salmon River, and the Snake River. These rivers do NOT need poisons & sludge draining into them. I grew up in southwestern Penna. near West Virginia where we would raft the Cheat River in W. Virginia. This river was ORANGE and had NO plant or animal life in it from the mining acids! Is this really what we want for any of Idaho's rivers?
