Title:

Comments: I am opposed to this project based on cumulative adverse effects on watershed conditions as identified in the EIS. I am particularly concerned with increased sedimentation and increased stream temperatures due to operations and infrastructure as well as impacts to fish passage and critical habitat areas within Meadow Creek. The headwaters of a world class river system with vital habitat for multiple native, at-risk fish species should not be the location of the open pit mining operations proposed by the applicant. Please reject this project.
