Title:

Comments: I'm not sure why the government bothers even taking these comments because the government never listens to anyone's input. It's just another requirement by law but we know the government often disregards any laws that are inconvenient to the scorched earth policy of build build build or drill baby drill. This midas gold strip mine should never be pursued. It places several branches of several rivers in jeopardy and is a huge risk to already struggling salmon & other fishes. The wild should be wild and free of construction projects & yet more expansion. It should be free of motorized vehicles and airplane noise. The United States has learned very little since it's formation and white colonial settlers have hunted & killed so many animal & plant species that it's hard to keep up and is very heartbreaking. Stop expanding & building and killing the planet for selfish short visions and dollar bills. May God guide & direct your decision and may God have mercy on your soul for your decisions. Thank you.
