Comments: Stibnite Gold Project EIS #50516

The USFS must say no to this noxious and toxic project.

First, the projected gold this mine will produce is not needed. It serves no legitimate, useful purpose.

Second, the negative impacts have no countervailing positive impacts. The noise, roads, cyanide, the inevitable leaks, the tailings, the loss of habitat, and the destruction caused by road access to the area are without any redeeming social or ecological purpose benefit--quite the contrary.

Third, approval of this project runs counter to the claims by the USFS that it "cares for the land and serves people." This project serves greedheads and the stupid.

Fourth, there should be no new mines in unless US the damages caused by old ones are fixed by the industry
