Comments:
One of the most magical ten days of my life were in August 1986 rafting the River of No Return with friends. This wilderness Is a million times more precious than gold. It is unimaginable that it could be sacrificed for mining company profits. I have visited gold mining operations. They leave hideous scars and toxic messes. Don't let it happen. The Salmon River wilderness belongs to all of us. Don't give it away to Perpetua.

The Stibnite Gold Project puts not only the famed Frank Church-River of No Return Wilderness at risk, but also the East Fork of the South Fork of the Salmon River and endangered species such as salmon, steelhead, and bull trout.
Under the preferred alternative, road construction and mining operations would cause serious impacts to the River of No Return Wilderness, including noise audible from a nearly 2-mile radius, wildlife disturbance and displacement, increased access to and activity in what are now quiet and lightly-visited places in the Wilderness, and sediment pollution in streams within the Wilderness.
The wilderness evaluation erroneously downplays these impacts.
The new proposed road would sit 100 feet from the wilderness boundary or could even enter the Wilderness, as the most logical location for the road seems to be an existing pack trail that dips into the Wilderness.
The last thing this area needs is more toxic mining and associated impacts.
The Forest Service needs to deny the permit for Perpetua Resource's Stibnite Gold Project and require Perpetua to finish cleaning up the mine site.
