Comments: I've read data presented from both sides of this project. I don't know how to determine if the truth is being told or if statements that favor/oppose this mine reopening project are simply telling me their side and only showing the points that would sway me to support one side more than the other.

I frequent the Frank Church Wilderness and hate to see damage done to this wilderness area. What data can you point me to that supports this project and the good, the bad and the ugly that may come from it?
