Comments: This project should not be allowed EVER because of the known harm(s) that will affect the area as a whole and some places individually. One of America's tribes has already spent millions of dollars along with Feds to cleanup past destruction left by mining here in the past and this is and should remain WILD for the sake of existing wildlife species and the different fishes that are already in existence here and that will only remain as is if new mining is STOPPED. We don't have enough truly wild spaces in America that are untouched to the point of some bad outcomes and this should not be allowed to happen here. There are only so many places our wildlife in America have to live and thrive due to humans disastrous events that start out with promises that never come to fruition. Our planet is in a critical position with climate change-much of it gotten this way thru the destruction of lands such as this!! What happens when all the lands are no longer what they should be and there is no way to reverse the harm we've allowed to continue?? I shudder to think of living in that time however it is closer than many realize and worse yet is far too many companies do not care. Please stop that from becoming a true tale of this land. This land is in YOUR hands along with the futures of many.
