Comments: In regards to the Stibnite Gold Project EIS#50516, I am writing to express dismay that the Forest Service would even consider such a bad idea with it's miles of destructive road construction along a pristine Salmon River East Fork as well as bordering a wilderness area just to get to a site where the headwaters are surely to be fouled and already fragile fish populations negatively impacted. Please deny this mining plan and show stewardship service for people wildlife and the planet' s dwindling resources. Stop selling off our heritage future and ruining the last best places for greedy mining and logging interests .
