Comments: Please DO NOT move forward with this project. Clean water and this ecosystem are important for the health of the wildlife and aquatic life. They can't relocate, it's survive or die for them. Which is what we are also doing to ourselves as humans each time we destroy another piece to the ecosystem puzzle that we live in. Whether we like it or not we are part of the ecosystem. When we cause the collapse of an ecosystem we are also destroying ourselves for what? A short term greed induced goal which will speed up the total collapse of the planet and all suffer. Look at the whole picture not what you want to see.
